

Dr. Catherine L. Johnson received her Ph.D. in Biological Oceanography from the University of California, San Diego in 2003. She worked as a research associate at the University of New Hampshire and at Dalhousie University, Halifax, NS from 2003 to 2006, and she was a National Science Foundation International Research Fellow at the Bedford Institute of Oceanography, Dartmouth, NS and Sir Alister Hardy Foundation for Ocean Science, Plymouth, UK from 2006-2007. Dr. Johnson has been a research scientist at the Bedford Institute of Oceanography since 2007. Her research focuses on biological and physical factors that control zooplankton distribution, abundance, community composition, and diversity, including the effects of climate variability on plankton populations and communities, interactions between zooplankton behavior and transport, and the role of dormancy in copepod life cycles.
